#### **Design Review Objectives and Input Documentation**

Page 1 of 3

- addition of human performance in the objectives for each type of review.

The table below lists the objectives and design review inputs for each type of design review. This list was developed based on PPPL experience in design reviews and using ANSI/ASQC D1160-1995, *Formal Design Review*, as guidance. It is recognized that the nature of systems under review may vary significantly and that, as a result, the inputs required may differ somewhat from what is listed. For each review, the specific inputs are subject to negotiation between the Cognizant Engineer, the Responsible Line Manager, and the design review Chairperson.

| Level of<br>Review  | Objectives   | Inputs for Design Review   |  |  |
|---------------------|--|--|--|--|
| Peer<br>Review      | <ul> <li>The objectives for any peer review might include a subset of the following:</li> <li>Communicate a proposed change to a requesting or performing group.</li> </ul>  | <ul> <li>Updated Work Planning form, if applicable.</li> <li>Documented requirements, if required by<br/>WP. Otherwise, requirements presented as<br/>part of review presentation.</li> <li>Identified hazards and appropriate mitigation<br/>techniques.</li> <li>Resource, schedule, and cost considerations.</li> </ul> |  |  |
|                     | Assure that the proper requirements are<br>identified. Requirements should include<br>functional, ES&H, regulatory, quality,<br>reliability, interfaces, project specific, test,<br>cost, human performance and ergonomics<br>and schedule.<br>Identify hazards associated with the work                                       |  |  |  |
|                     | <ul> <li>or its impact on operations and appropriate mitigation.</li> <li>Alert others (e.g. ES&amp;H, QA, ER/WM) security of a proposed change in order to clarify group responsibilities within the change</li> </ul>  |  |  |  |
|                     | • Alert impacted organizations or systems of the change  |  |  |  |
|                     | • Discuss resources, schedule, and cost.   |  |  |  |
| Conceptual<br>(CDR) | <ul> <li>Assure that the proper requirements are<br/>identified and can be satisfied within<br/>acceptable envelops. Requirements should<br/>include functional, ES&amp;H including human<br/>performance and ergonomics, regulatory,<br/>security, quality, reliability, interfaces,<br/>project specific and test</li> </ul> | <ul> <li>Updated Work Planning form, if applicable.</li> <li>Requirements.</li> <li>Design and development plan.</li> <li>Resource, schedule, and cost considerations.</li> <li>Resolution of chits from prior reviews, if any.</li> </ul>   |  |  |
|                     | <ul> <li>Review development and design plans and schedules.</li> </ul>   |  |  |  |
|                     | <ul> <li>Review cost and schedule estimates,<br/>including contingencies.</li> </ul>   |  |  |  |
|                     | <ul> <li>Review configurations or designs that are<br/>novel to PPPL.</li> </ul>   |  |  |  |
|                     | <ul> <li>Obtain input when competing design approaches exist.</li> </ul>   |  |  |  |
|                     | <ul> <li>Identify hazards associated with the work<br/>or its impact on operations and appropriate<br/>mitigation</li> </ul>   |  |  |  |
|                     | <ul> <li>Review and assure that appropriate design</li> </ul>  |  |  |  |

#### Human Performance Improvement/Factors Considerations in

Design Reviews

Potentially relevant design review questions are listed below. However, the reader should not limit the human performance aspects of a review to these questions.

- 1. Have potential human or mechanical failures been identified? If so, is there adequate defense in depth<sup>1</sup> to either assure that these failures do not occur or, if they do, the consequences of these failures are minimized?
- 2. Does this design result in latent errors<sup>2</sup> that should be corrected?
- 3. Does the design take into consideration the human factors associated with fabrication, installation, testing, and operation? Considerations include:
  - a. Are the human interfaces and displays consistent with the work to be done, consistent with other interfaces and displays that the same individuals must use, easy to understand, properly labeled, considerate of human limitations such as color blindness, etc.?
  - b. Can the final fabrication or construction be safely performed? Are unique tools required that may not be available? Are there excessive lifting or carrying requirements? Does the design require people to work in an awkward position?

<sup>&</sup>lt;sup>1</sup> An approach to facility safety that builds in layers of defense against release of or exposure to hazardous materials so that no one layer by itself, no matter how good, is completely relied upon. To compensate for potential human and mechanical failures, defense in depth is based on several layers of protection with successive barriers to prevent the release of or exposure to hazardous materials. This approach includes protection of the barriers to avert damage to the plant and to the barriers themselves. It includes further measures to protect the public, workers, and the environment from harm in case these barriers are not fully effective. Defense in depth controls include engineering controls, administrative processes, and personnel staffing and capabilities.[DOE M 450.1]

<sup>&</sup>lt;sup>2</sup> An error, act, or decision that results in organization-related weaknesses or equipment flaws that lie dormant until revealed either by human error, testing, or self-assessment. [DOE M 450.1]
